

WINTER CHILL

Tips For Keeping Your Swine Herd Healthy

1

Feed The Immune System

Use FURST PROTECT DIRECT™ - the only product of its kind delivering a complete nutritional health solution via drinking water

2

Prevent Barn Drafts

Too much cold air intake could lower pig activity resulting in decreased feed intake. Patch barn holes and insulate windows.

3

Use Best Bio-Security Protocols

Set practical measures to prevent entrance of infection into your pig farm and control the spread of infection within that farm.

4

Maintain Feed & Water Supply

Having feed and water outages can harm the pigs gut integrity and immune defense.
